

1G-3G Wireless Communications Potentials in Airport Surface and in Air

Mohammed A. Shamma

Evolution to 3G

Based on predicted traffic by year 2015 (referenced from ARINC/TRW/SAIC report)

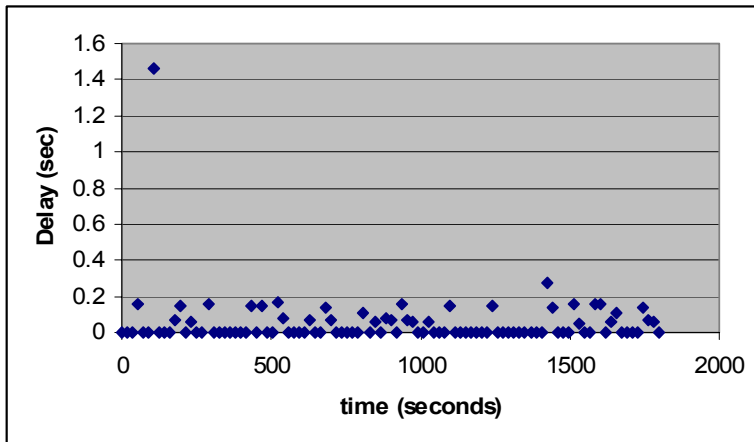

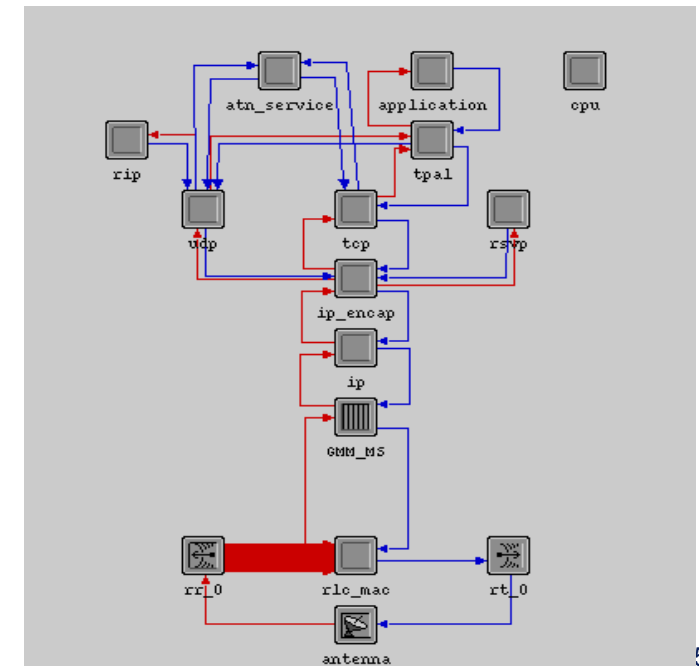

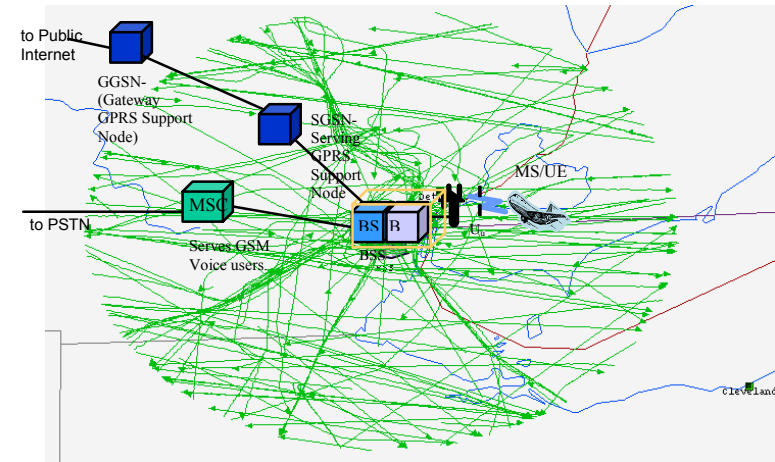

Domains are defined as 10 minutes flights in airport and terminal and 50 minutes in en route. Traffic corresponds to 192 aircraft at airport, 137 aircraft in terminal, and 500 in en route

Data Message Traffic for All Classes of Aircraft (K-bits per second)

| 2015 | Airport Uplink | Airport Downlink | Terminal Uplink | Terminal Downlink | En Route Uplink | En Route Downlink |
|---------------|-----------------------|-------------------------|------------------------|--------------------------|------------------------|--------------------------|
| FIS | 0.2 | 0.0 | 0.9 | 0.0 | 6.9 | 0.0 |
| TIS | 23.7 | 0.0 | 7.0 | 0.0 | 20.5 | 0.0 |
| CPDLC | 3.4 | 2.9 | 1.3 | 0.9 | 1.1 | 1.3 |
| DSSDL | 0.2 | 0.3 | 0.1 | 0.2 | 0.1 | 0.1 |
| AOC | 0.4 | 8.4 | 0.6 | 8.5 | 0.2 | 3.5 |
| ADS Reporting | 0.0 | 16.1 | 0.0 | 3.3 | 0.0 | 1.5 |
| AUTOMET | 0.0 | 0.0 | 0.0 | 4.4 | 0.0 | 6.2 |
| APAXS | 0.0 | 0.0 | 0.0 | 0.0 | 131.7 | 115.5 |

A GPRS Analyses/Simulation Under Airport Traffic Loads

| Reliability Class | Lost SDU probability | Duplicate SDU Probability | Out of sequence SDU prob. | Corrupt SDU probability |
|--|----------------------|---------------------------------------|---------------------------|---------------------------------------|
| 1 | 10^{-9} | 10^{-9} | 10^{-9} | 10^{-9} |
| 2 | 10^{-4} | 10^{-5} | 10^{-5} | 10^{-6} |
| 3 | 10^{-2} | 10^{-5} | 10^{-5} | 10^{-2} |
| Delay Class for Standard Data Unit SDU | SDU of 128 bytes | | SDU of 1024 bytes | |
| | Mean (seconds) | 95 th percentile (seconds) | Mean (seconds) | 95 th percentile (seconds) |
| 1 | Less than 0.5 | Less than 1.5 | Less than 2 | Less than 7 |
| 2 | Less than 5 | Less than 25 | Less than 15 | Less than 75 |
| 3 | Less than 50 | Less than 250 | Less than 75 | Less than 375 |

1G-3G systems/experiments useful to ATM future research

- The AirCell for example provides the capability for Internet connection (using circuit switched data) and have been used with transmission of low resolution graphics from NEXRAD weather images
- The Iridium has been shown to support ADS-A via experimental tests in Alaska with the Capstone Projects by the FAA
- The current system AST-3500 by AirCell/Iridium uses the two technologies described to provide global coverage for aeronautical services
- GSM-Rail (used to control, operate train traffic and signaling) is a good bench mark for systems tailored for safety critical systems. Trains used a Has been deployed in many places around the world.
- EUROCONTORL and Roke Manor did experiments to support ATM communications via UMTS TDD in 2002/03. Results were encouraging.
- Satellite and terrestrial UMTS integration has been heavily researched in global projects such as RACE ACTS SINUS and other projects.
